

Booleans

Booleans (bool)

The boolean data type (or bools) hold one of two values: **True** or **False**.

```
[2]: bool_var1 = True

print('Var 1', bool_var1, type(bool_var1))

bool_var2 = False

print('Var 2', bool_var2, type(bool_var2))
```

```
Var 1 True <class 'bool'>
Var 2 False <class 'bool'>
```
